

Homework 2 - Due 2/20/2013

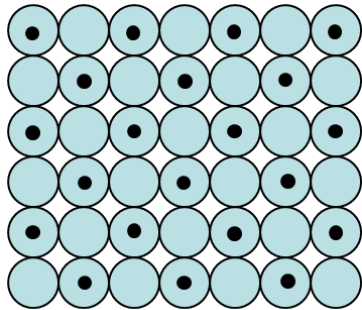

John Kitchen

2013-02-13 Mon

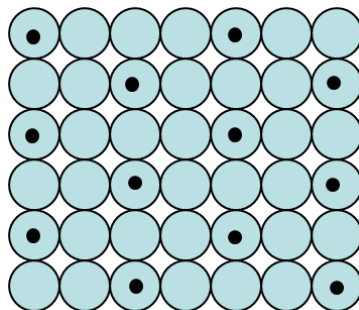

1 Calculate the number of atoms/cm² in the following surfaces:

- a) FCC(100) Cu, Pt
- b) FCC(111) Cu, Pt
- c) BCC(100) Mo, W
- d) BCC(110) Mo, W

2 In the following image the large blue circles are the surface metal atoms and the small black circles represent adsorbates.

A.

B.

- a) Give an example of what surface the large circles could represent.
- b) Describe the overlayer in each case using matrix notation. If possible, also express the overlayer using Wood's notation.
- c) Calculate the reciprocal lattice vectors for each case.
- d) Sketch the LEED pattern you expect for these two surfaces.
